Teachin	g Metho	d								
The ai an arc so on. Outline gener termir buildir			m of this course is to acquire the knowledge on basic construction-related laws and regulations which hitectural engineer is required to have for designing buildings, conducting construction supervision, and There are many different types of construction-related laws and regulations, and they are expressed in tract way in order to fit many cases. Furthermore, because they are technical laws, it is difficult for the all public to read and comprehend them. Therefore, this class will explain how to read the legal ology and the basics of term definitions, etc., followed by basic matters such as how to calculate the garea, height, floors, and individual and group provisions. Utsumi has been engaged in building istration and construction instruction as a superintendent for local governments for many years.							
Style Style Studengir		Students engineer Students and regr	the structural entraction instruction as a superimental laws and regulations which an architectural entraction is required to have for designing buildings and conducting construction supervision, and so on. In the structural entraction is responsibility in complying with construction-related laws equilations as an architectural engineer. They will acquire the basic ability to solve specific construction-ty-related issues by using construction-related laws and regulations.							
Students should always prepare textbooks (Kihon Kenchiku Kankei Horeishu [Collection of Basic Construction I Related Laws] and Keichiku Hoki Yo Kyozai [Educational Materials for Construction Laws and Regulations Students who miss 1/3 or more of classes will not be eligible for a passing grade.							ruction Laws and Regulations1).
